

Bohm's Rorschach IQ Estimations

Beck's criteria are (from Bohm 1975):

	Intelligence Level					
	W	M	SumC	F+%	A%	Original %
Very high	>10	>10	>4-7	90-100	10-20	30-50
High	7-10	7-9	1.5-3.5	80-100	20-35	20-30
Normal	4-6	4-6	0.5-2.5	70-80	30-55	0-20
Borderline	3	3-4	1.5-6	60-70	50-70	0-20
Mild Retardation	2	1-3	0	45-60	60-80	30-40
Moderate Retardation	0-1	0-2	5.5-8.5	0-45	80-100	40-70

W includes WS;

M should be scored in the classical way.

The W's and M's should be plus form level to count (according to Bohm).

The F+% is the classical F+% (which includes the CS Fo and Fu; i.e.. it is (100 - F-%) as scored with CS).

The A% presupposes that content is scored only once per response, or else you have to correct for multiple content scores.

I have been involved in a pilot study (not yet published) where the correlation between WAIS full IQ and a numerical score derived from these ideas of Beck's was quite strong. So I, for one, believe in their validity. Hope to recruit you too, Brenton!
