

Clinical Scale Elevations

Scale(s) 9 (Ma)

T-score \geq 69

Elevations on the present Scale(s), taking race, gender, age, education, marital and employment status into consideration for the corresponding group's data indicate any or all of these clinical features could be present in this person's behavior and history:

They are excitable, high-energy people. They enter social situations with ease. They probably do not need as much sleep as most people. They work with enthusiasm. Their movements are rapid, coordinated, and they can sustain physical effort for long periods. They speak more rapidly than most others do. They like to be in control of their activities. They are organized, efficient, and manage their affairs effortlessly.

They like the excitement of new experiences. They will try anything. They thrive in the company of other people. These contacts stimulate them. The more intense the interactions, the more they enjoy the coming together. Partying, dancing, drinking, loud music and concerted muscular activities provide them with the heightening and intensifying of those sensations they crave and cherish.
